ENVIRONMENTAL ANALYTICAL
TECHNIQUES AND LABORATORY
MANAGEMENT

Oct/Nov. 2014

Time: 3 hours

Candidate's Signature: _____

Date: _____

THE KENYA NATIONAL EXAMINATIONS COUNCIL

DIPLOMA IN ENVIRONMENTAL SCIENCE AND TECHNOLOGY

MODULE II

ENVIRONMENTAL ANALYTICAL TECHNIQUES AND LABORATORY MANAGEMENT

3 hours

INSTRUCTIONS TO CANDIDATES

Write your name and index number in the spaces provided.

Use only one side of the page of examination in the spaces provided only.

You should have a non-programmable scientific calculator for this examination.

This paper consists of TWO sections, A and B.

Answer ALL the questions in section A and any THREE questions from section B in the spaces provided in this question paper.

Each question in section A carries 4 marks while each question in section B carries 20 marks.

Candidates should answer the questions in English.

For Examiner's Use Only

SECTION A										Total	
Question	1	2	3	4	5	6	7	8	9		10
Candidate's score											

SECTION B						Grand Total
Question	11	12	13	14	15	
Candidate's score						

This paper consists of 16 printed pages.

Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no questions are missing.

Answer ALL the questions in this section in the space provided.

Name: Four ...

(b) Two solvents are equally suitable for recrystallization process. State two factors of preference in choosing one of them. (2 marks)

1. Explain the reason for sublimation of dry ice. (2 marks)

(c) Give two disadvantages of sublimation as a separation technique. (2 marks)

Explain two factors that govern the type of solvent used in Soxhlet extraction. (4 marks)

501. a. Explain four ways in which the role of a leader has changed in the past 50 years. (12 marks)

8. State four reasons why the approach of a manager, supervisor, or team leader is important. (4 marks)

9. Name four basic elements of a written communication message. (4 marks)

10. (a) Explain the meaning of the term 'credibility'.

(b) State three reasons that make people accept authority. (3 marks)

10. Name the type of management style that is ineffective when:

(a) the workers are apathetic.

(b) employees must be coordinated.

(c) employees are highly skilled.

(d) the leader is not credible.

SECTION 15 (continued)

Answer each of the following questions in the space provided. Show all work.

- (c) Explain the difference between a physical and a chemical change.
- (d) Calculate the percent yield of the reaction between potassium permanganate and hydrochloric acid.
- (e) Write the balanced chemical equation for the reaction between aluminum and hydrochloric acid.
- (f) Calculate the molar mass of the compound $\text{C}_2\text{H}_6\text{O}$.
- (g) Calculate the percent composition of the compound $\text{C}_2\text{H}_6\text{O}$.
- (h) Calculate the number of moles of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (i) Calculate the mass of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (j) Calculate the number of molecules of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (k) Calculate the number of atoms of each element in a 10.0 g sample of $\text{C}_2\text{H}_6\text{O}$.
- (l) Calculate the empirical formula of a compound that is 40.0% carbon, 6.7% hydrogen, and 53.3% oxygen.
- (m) Calculate the molecular formula of a compound that has a molar mass of 180 g/mol and a percent composition of 40.0% carbon, 6.7% hydrogen, and 53.3% oxygen.
- (n) Calculate the number of moles of H_2O in a 10.0 g sample.
- (o) Calculate the mass of H_2O in a 10.0 g sample.
- (p) Calculate the number of molecules of H_2O in a 10.0 g sample.
- (q) Calculate the number of atoms of each element in a 10.0 g sample of H_2O .
- (r) Calculate the empirical formula of a compound that is 50.0% carbon, 4.3% hydrogen, and 45.7% oxygen.
- (s) Calculate the molecular formula of a compound that has a molar mass of 170 g/mol and a percent composition of 50.0% carbon, 4.3% hydrogen, and 45.7% oxygen.
- (t) Calculate the number of moles of CO_2 in a 10.0 g sample.
- (u) Calculate the mass of CO_2 in a 10.0 g sample.
- (v) Calculate the number of molecules of CO_2 in a 10.0 g sample.
- (w) Calculate the number of atoms of each element in a 10.0 g sample of CO_2 .
- (x) Calculate the empirical formula of a compound that is 60.0% carbon, 4.4% hydrogen, and 35.6% oxygen.
- (y) Calculate the molecular formula of a compound that has a molar mass of 160 g/mol and a percent composition of 60.0% carbon, 4.4% hydrogen, and 35.6% oxygen.
- (z) Calculate the number of moles of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (aa) Calculate the mass of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (ab) Calculate the number of molecules of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (ac) Calculate the number of atoms of each element in a 10.0 g sample of $\text{C}_2\text{H}_6\text{O}$.
- (ad) Calculate the empirical formula of a compound that is 70.0% carbon, 4.5% hydrogen, and 25.5% oxygen.
- (ae) Calculate the molecular formula of a compound that has a molar mass of 150 g/mol and a percent composition of 70.0% carbon, 4.5% hydrogen, and 25.5% oxygen.
- (af) Calculate the number of moles of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (ag) Calculate the mass of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (ah) Calculate the number of molecules of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (ai) Calculate the number of atoms of each element in a 10.0 g sample of $\text{C}_2\text{H}_6\text{O}$.
- (aj) Calculate the empirical formula of a compound that is 80.0% carbon, 4.6% hydrogen, and 15.4% oxygen.
- (ak) Calculate the molecular formula of a compound that has a molar mass of 140 g/mol and a percent composition of 80.0% carbon, 4.6% hydrogen, and 15.4% oxygen.
- (al) Calculate the number of moles of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (am) Calculate the mass of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (an) Calculate the number of molecules of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (ao) Calculate the number of atoms of each element in a 10.0 g sample of $\text{C}_2\text{H}_6\text{O}$.
- (ap) Calculate the empirical formula of a compound that is 90.0% carbon, 4.7% hydrogen, and 5.3% oxygen.
- (aq) Calculate the molecular formula of a compound that has a molar mass of 130 g/mol and a percent composition of 90.0% carbon, 4.7% hydrogen, and 5.3% oxygen.
- (ar) Calculate the number of moles of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (as) Calculate the mass of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (at) Calculate the number of molecules of $\text{C}_2\text{H}_6\text{O}$ in a 10.0 g sample.
- (au) Calculate the number of atoms of each element in a 10.0 g sample of $\text{C}_2\text{H}_6\text{O}$.

easytype

(c) A 5.00 g solid mixture of anhydrous calcium chloride (CaCl_2) and sodium nitrate (NaNO_3) was dissolved in 250 ml of deionized water to form a solution mixture. 21.2 ml of 0.1 mol/L Silver Nitrate (AgNO_3) solution precipitated all the chloride ions which formed against 25.0 ml of the resulting mixture in a conical flask.

Determine:

- (i) the moles of chloride ions formed; (2 mark)
- (ii) the equivalent moles of calcium chloride formed; (2 mark)
- (iii) the equivalent mass of calcium chloride formed; (2 mark)
- (iv) the total mass of calcium chloride in the original 5.00 g of the mixture; (2 mark)
- (v) the % of calcium chloride and sodium nitrate in the original 5.00 g of the mixture. (4 mark)
